# ABOUT ARKCEIL

ArkCeil provides modern engineered ceiling solutions for architects, contractors, and designers seeking innovation and practicality. Our advanced polymer technology captures wood's natural beauty through high-precision heat-transfer finishes, without the upkeep of traditional materials. The fully integrated system-panels, trims, accessories-streamlines installation, cuts site complexity, and delivers consistent results for residential and commercial projects.

# PROFILE DESIGN

**ArkCeil Mini Louvers** features a refined six-part architectural profile with five integrated grooves, delivering the highest level of shadow precision and surface richness in the ArkCeil range. The high-detail design produces a deeply textured ceiling appearance where every line and groove contributes to a broader narrative of quality and

Best suited for luxury residences, boutique hotels, upscale restaurants, spa interiors, and architectural accent zones where the ceiling is intentionally designed to be seen and appreciated. The profile of choice when precision, texture, and visual richness are the brief.

# BASE COLLECTION

**Birch**

**Golden Maple**

**Golden Oak**

**Walnut**

**Mahogany**

**Oak Wood Ochre**

**Royal Nut**

**Ashwood Grey**

**Super White**

**Our nine premium** wood-grain finishes capture the authentic beauty of natural timber, engineered for architectural precision and lasting performance. Each shade replicates genuine wood characteristics through advanced heat-transfer technology, delivering realistic grain patterns and surface textures that maintain their appearance across years of exposure.

From the warmth of Golden Oak and rich depth of Walnut to the contemporary neutrality of Ashwood Grey and crisp clarity of Super White, these finishes offer architects and designers versatile options for residential, commercial, and hospitality projects. Oak Wood Ochre, Mahogany, Royal Nut, Birch, and Golden Maple complete a sophisticated palette that harmonizes with diverse interior styles while ensuring seamless coordination across soffit, baffle, and accessory systems.

# FEATHER TOUCH COLLECTION

**Experience** the next level of surface sophistication with Feather Touch Shades, where advanced polymer technology creates an ultra-soft, velvety matte finish that feels more natural.

Classic Walnut, Amber Oak, Nutmeg Maple, and Vintage Teak deliver whisper-soft tactility with zero light reflection perfect for luxury interiors where refined texture elevates every surface. These premium finishes offer architects and designers authentic wood character with engineered precision, ensuring a flawless, maintenance-free appearance that ages gracefully in high-end residential and hospitality applications.

# IDEA APPLICATION & FEATURES

The ArkCeil Mini Louvers is designed for spaces where the ceiling is not an afterthought but a centrepiece. With its six-bar, five-groove profile, it commits fully to detail, texture, and precision setting the tone in luxury residences, boutique hotels, upscale restaurants, and spa interiors where every surface is expected to match the ambition of the overall design.

What sets it apart is its ability to reward every level of attention. From across the room it reads as richly textured and deeply considered. Up close, the precision of every groove and shadow line speaks directly to quality and craft the profile architects specify when they want the ceiling to be the most refined thing in the room.

# INSTALLATION SYSTEM

## Step 1 Fix J Trim

Screw J Trim on the ceiling to frame the installation area.

## Step 2 Cut Panels

Measure & cut soffit panels to size.

## Step 3 Install Panels

Start from one end → Insert into J Trim → Screw onto furring (opposite orientation) → Interlock next panel.

## Step 4 Fix J Trim

Continue till full coverage. Done!

# PROPERTIES OF SOFFIT SYSTEM

ArkCeil Soffit panels are valued for their robust practical performance. Designed to withstand varied environmental conditions humidity, moisture, temperature changes the panels maintain their finish and structural integrity over time. They are resistant to biological corrosion caused by algae, fungi, and bacteria, making them well-suited for semi-outdoor and covered spaces. Unlike natural wood, ArkCeil Soffit panels require no periodic sealing, painting, or treatment. They are also lead-free and safe for interior use, including residential spaces where air quality and material safety matter.

The lightweight construction of ArkCeil panels simplifies self-assembly and reduces load on the building structure. The integrated universal trim system J-Trim, T-Trim, Inside Corner, and Outside Corner ensures that all edges and junctions are finished cleanly, without the need for custom fabrication on site.

Finishing a ceiling or soffit with ArkCeil also allows for the concealment of wiring and structural components, creating a clean visual surface. The system is compatible with standard lighting installations, enabling architects and homeowners to integrate ceiling lighting for ambiance, security, or accent purposes.
